DOMAIN REGISTRATION

HOSTING PURCHASE AND SETTINGS

WORDPRESS INSTALLATION

Uni**Ge** | DAD

Recap

Web site creation

Step 1 DOMAIN registration

A **domain** is the unique name that identifies a website. It serves as the address where Internet users can access the site. Domains are part of URLs, which specify addresses on the internet.

Being unique, you need to verify that it is available!

If the domain is already registered, a warning will be displayed along with some suggestions for similar names or available extensions.

Step 2 HOSTING purchase

Hosting is the physical space where your online site is installed.

Imagine renting a small piece of a hard disk to store your files.

There are many types of hosting, and the price varies depending on their power, performance, and quality.

We will use **Netsons** free hosting service

Step 3 Wordpress istallation

A **CMS** (Content Management System) is software that runs in your browser and enables nonprofessional users to easily store, organize, and publish web content without any programming knowledge.

WordPress, Joomla, WIX, Magento, Prestashop, and Drupal are some of the major ones.

We will use Wordpress

Web site creation

Step 4 THEME Installation

A **theme** is what allows us to customize our site, by choosing, for example, *colors*, arrangement of *images* and *text*, *menus*

(Everything we can call layout).

Step 5 PLUGINS Installation

Plugins are extensions (modules) that allow us to add functionality to our site, for example:

- Cookie management;
- Under construction
- Form creation.

A **widget** is a small block of code that performs a specific function (calendar, a weather forecast, or social media feeds. Step 6 User and Content Creation

Once the structure of a website is created, it's necessary to add content:

- Texts,
- Videos,
- Audio,
- Images,

and create user profiles that will have different interaction rights.
